Who We Are - Infosun Technology

Infosun is a healthcare IT integration and enterprise software solutions company that combines in-depth industry expertise with broad technology capabilities.

We believe technology is an "enabler" to delivering key business objectives.

Our company provides thought-leadership and healthcare IT solutions in:

- Management Consulting (PMO, Strategic IT Planning, Architecture Design)
- Software Development (World Class Off-Shore Development Center)
- Enterprise Solutions (Legacy/Application Integration, Web-Enablement)
- Strategic Sourcing (Expert IT Staffing)
- Quality Assurance/Testing (Functional, Regression, Use Cases)

:infosun:

What We Know – Healthcare Provider Space

Understanding the complex workflows and business processes within healthcare provider environments is critical to gain adoption from key business stakeholders and deliver enterprise solutions that **Shape** the business, not just support it.

Based on our understanding of the healthcare provider environment, Infosun can provide domain expertise to Cardinal Health and its customers aligning with these sample areas:

- Unique provider environment workflows and need for automated processes
- **Pharmacy/Formulary** interoperability requirements at **Order Entry** to drive profits
- How to leverage **Positive Patient ID** solutions to achieve improved **Clinical Decision Support**
- B2B clinical and business data transaction workflow re-design without impacting **Patient Safety**
- Automating paper forms into interactive **Digital Libraries** with **Centralized Management**
- **Integrating technology solutions** that fit within the mobile workflows of physicians

What We Can Do For You ?

Infosun understands the Cardinal Health provider customers' wants and needs and has 30+ years direct healthcare IT experience working with large healthcare organizations identifying and implementing IT solutions. This industry-specific healthcare experience can bring value to Cardinal Health and its customers:

1. Align ourselves with Product Teams to further enhance Cardinal offerings by providing customer domain expertise (new features, functionality) and defining integration roadmaps to lessen the burden on healthcare systems ability to implement Cardinal Solutions.

2. Assess low performing product/service offerings and determine what root clinical process, clinical workflow, documentation requirement, or administrative workflow is causing the product or service to perform poorly. Once identified, document a work plan to bring the service line back into profitability.

3. Leverage Infosun's knowledge and experience in the HIS integration space to provide Cardinal product implementations with pre-built integration packages that bring even more value and ease the burden of implementing these large systems in provider environments.
